ARTICLES	BRIEF COMMUNICATION
<p>Genetic and Environmental Influences on Total-Body and Central Abdominal Fat: The Effect of Physical Activity in Female Twins 873</p> <p><i>K. Samaras, P.J. Kelly, M.N. Chiano, T.D. Spector, and L.V. Campbell</i></p> <p>Current physical activity predicted lower total-body and central abdominal adiposity in healthy middle-aged female identical twins. After adjustment for genetic and environmental factors, the influence of physical activity was greater than that of other measured environmental factors.</p>	<p>Treatment of the Systemic Capillary Leak Syndrome with Terbutaline and Theophylline. A Case Series 905</p> <p><i>N.K. Tahirkheli and P.R. Greipp</i></p> <p>A regimen of terbutaline and theophylline seems to be effective prophylaxis against the systemic capillary leak syndrome. In this series of eight patients, maintenance of therapeutic drug levels was associated with favorable results.</p>
<p>Association between Body Mass and Adenocarcinoma of the Esophagus and Gastric Cardia 883</p> <p><i>J. Lagergren, R. Bergström, and O. Nyrén</i></p> <p>The association between body mass index and esophageal carcinoma was strong and was not explained by bias or confounding. The carcinogenic mechanism, however, remains to be clarified. The increasing prevalence of obesity in western countries could be important in understanding the increasing occurrence of this tumor.</p>	<p style="text-align: center;">REVIEW</p> <p>Functional Somatic Syndromes 910</p> <p><i>A.J. Barsky and J.F. Borus</i></p> <p>Functional somatic syndromes cause great suffering and disability and have substantial societal costs. The public needs to recognize the ubiquity of benign symptoms and self-limited syndromes and to appreciate the influence of psychosocial factors on the experience of illness. Clinicians, in turn, should continue to search for biological and physical causes of symptoms but also examine psychological and sociocultural factors.</p>
<p>Large Pleural Effusions Occurring after Coronary Artery Bypass Grafting 891</p> <p><i>R.W. Light, J.T. Rogers, D. Cheng, R.M. Rodriguez, and Cardiovascular Surgery Associates, PC</i></p> <p>Large pleural effusions may develop in a small proportion of patients after coronary artery bypass grafting. Most bloody effusions can be managed with one to three therapeutic thoracenteses. Resolution of nonbloody effusions may require anti-inflammatory agents, tube thoracostomy, or intrapleural injection of antisclerosing agents.</p>	<p style="text-align: center;">NIH CONFERENCE</p> <p>Recent Advances in Varicella-Zoster Virus Infection 922</p> <p><i>J.I. Cohen, P.A. Brunell, S.E. Straus, and P.R. Krause</i></p> <p>This conference paper focuses on recent developments in the biology, clinical presentation, treatment, and prevention of varicella-zoster virus infections.</p>
<p>The Effect of Low-Dose Continuous Estrogen and Progesterone Therapy with Calcium and Vitamin D on Bone in Elderly Women. A Randomized, Controlled Trial 897</p> <p><i>R.R. Recker, K.M. Davies, R.M. Dowd, and R.P. Heaney</i></p> <p>In elderly women, continuous low-dose hormone replacement therapy with conjugated equine estrogen and oral medroxyprogesterone combined with adequate calcium and vitamin D provides a bone-sparing effect that is similar or superior to that provided by other, higher-dose hormone replacement regimens.</p>	<p style="text-align: center;">PERSPECTIVE</p> <p>Evaluating Novel Cardiovascular Risk Factors: Can We Better Predict Heart Attacks? 933</p> <p><i>P.M. Ridker</i></p> <p>When considering the clinical utility of screening for a new marker of cardiovascular disease, physicians should determine whether a standardized and reproducible assay for the marker is available, whether a consistent series of prospective studies indicate that baseline elevations of the marker predict future risk, and whether assessment of the marker adds to the predictive value of other plasma-based risk factors.</p>

EDITORIAL	
Genes and Obesity: Is There Reason To Change Our Behaviors?	938
<i>R.L. Weinsier</i>	
If someone is genetically predisposed to be physically inactive, is he or she predestined to become obese? The article by Samaras and colleagues in this issue contributes to our understanding of this question by examining the relation of physical activity and dietary behaviors to adiposity while controlling for genetic influences.	
ON BEING A PATIENT	
The Other Side of the Bed Rail	940
<i>M.O. Horn</i>	
As the pace of change in medicine quickens, physicians who teach will bear a special responsibility to provide strong examples of empathy and professionalism to students and residents. After all, one day we may find ourselves on the other side of the bed rail.	
AD LIBITUM	
Double Helix	941
<i>A. Deodhar</i>

Toward an Understanding of Frailty	945
<i>D. Hamerman</i>	
Ameliorating frailty is an important health care goal that has enormous societal implications. This article describes many of the clinical correlates of frailty and considers evidence for this condition's biological underpinnings.
