ARTICLES	BRIEF COMMUNICATIONS
<p>Gastrointestinal Symptoms in 3181 Volunteers Ingesting Snack Foods Containing Olestra or Triglycerides. A 6-Week Randomized, Placebo-Controlled Trial 253</p> <p><i>R.S. Sandler, N.L. Zorich, T.G. Filloon, H.B. Wiseman, D.J. Lietz, M.H. Brock, M.G. Royer, and R.K. Miday</i></p> <p>Clinically meaningful or bothersome gastrointestinal effects are not associated with unregulated consumption of olestra corn chips and potato chips in the home.</p>	<p>Nefazodone-Induced Liver Failure: Report of Three Cases 285</p> <p><i>J. Aranda-Michel, A. Koehler, P.A. Bejarano, J.E. Poulos, B.A. Luxon, C.M. Khan, L.C. Ee, W.F. Balistreri, and F.L. Weber Jr.</i></p> <p>Liver failure occurred in three patients after they began receiving nefazodone. The temporal onset of disease after the start of this therapy suggests that it caused severe hepatocellular injury.</p>
<p>Effects of Estrogen and Estrogen-Progestin on Mammographic Parenchymal Density 262</p> <p><i>G.A. Greendale, B.A. Reboussin, A. Sie, H.R. Singh, L.K. Olson, O. Gatewood, L.W. Bassett, C. Wasilaukas, T. Bush, and E. Barrett-Connor, for the Postmenopausal Estrogen/Progestin Interventions (PEPI) Investigators</i></p> <p>Women receiving estrogen-progestin had an increased risk for having denser breasts on mammography compared with women who received conjugated equine estrogens only. This trial indicates that further study of the magnitude and meaning of increased mammographic density due to use of estrogen and estrogen-progestins is warranted because mammographic density may be a marker of risk for breast cancer.</p>	<p>Association between the Epworth Sleepiness Scale and the Multiple Sleep Latency Test in a Clinical Population 289</p> <p><i>S.R. Benbadis, E. Mascha, M.C. Perry, B.R. Wolgamuth, L.A. Smolley, and D.S. Dinner</i></p> <p>No statistically or clinically significant association was seen between scores on the subjective Epworth Sleepiness Scale and results of the objective mean sleep latency test. These tests may evaluate different, complementary aspects of sleepiness.</p>
<p>Elevated Serum Estradiol and Testosterone Concentrations Are Associated with a High Risk for Breast Cancer 270</p> <p><i>J.A. Cauley, F.L. Lucas, L.H. Kuller, K. Stone, W. Browner, and S.R. Cummings, for the Study of Osteoporotic Fractures Research Group</i></p> <p>Estradiol and testosterone levels may play important roles in the development of breast cancer in older women. A single measurement of bioavailable estradiol and free testosterone may be used to estimate a woman's risk for breast cancer.</p>	<p style="text-align: center;">UPDATE</p> <p>Coccidioidomycosis: A Regional Disease of National Importance. Rethinking Approaches for Control 293</p> <p><i>J.N. Galgiani</i></p> <p>Coccidioidomycosis is an increasingly important health problem because of the migration of large numbers of persons to portions of the endemic southwestern United States and the increasing numbers of immunosuppressed patients. This Update discusses the importance of early diagnosis, specific tests for diagnosis, management of newly diagnosed infections, use of specialists in a multidisciplinary approach to management, opportunities for research, and the need for reassessment of institutional policy.</p>
<p>Birthweight and the Risk for Type 2 Diabetes Mellitus in Adult Women 278</p> <p><i>J.W. Rich-Edwards, G.A. Colditz, M.J. Stampfer, W.C. Willett, M.W. Gillman, C.H. Hennekens, F.E. Speizer, and J.E. Manson</i></p> <p>Even after adjustment for adult body mass index and maternal history of diabetes, birthweight was found to be inversely associated with risk for type 2 diabetes during adulthood.</p>	<p style="text-align: center;">REVIEW</p> <p>Biliary Sludge 301</p> <p><i>C.W. Ko, J.H. Sekijima, and S.P. Lee</i></p> <p>Biliary sludge is a controversial entity related to gallstones. This paper reviews the chemical composition, pathogenesis, diagnosis, clinical course, complications, treatment, and prevention of biliary sludge.</p>

MEDICINE AND PUBLIC ISSUES	
When Doctors Marry Doctors: A Survey Exploring the Professional and Family Lives of Young Physicians	312
<i>N.W. Sobecks, A.C. Justice, S. Hinze, H.T. Chirayath, R.J. Lasek, M. Chren, J. Aucott, B. Juknialis, R. Fortinsky, S. Youngner, and C.S. Landefeld</i>	
Men and women in dual-doctor families differed from other physicians in many aspects of their professional and family lives, but they achieved their career and family goals as frequently.	
EDITORIALS	
Fat, Foreboding, and Flatulence	320
<i>H.M. Spiro</i>	
Sandler and colleagues' controlled study of the gastrointestinal effects of olestra highlights the intriguing role of placebos in clinical studies.	
The Fetal Origins of Type 2 Diabetes Mellitus	322
<i>D.J.P. Barker</i>	
In this issue, Rich-Edwards and colleagues report that low birthweight is related to development of type 2 diabetes. The mechanisms by which malnutrition and retarded growth in utero lead to lifelong changes in glucose and insulin metabolism need to be explored.	
The National Diabetes Education Program: Changing the Way Diabetes Is Treated	324
<i>C.M. Clark Jr.</i>	
Emerging findings of the benefit of tight glucose control in patients with type 2 diabetes have prompted the National Institutes of Health and the Centers for Disease Control and Prevention to sponsor a major national initiative, the National Diabetes Education Program. This program seeks to improve the treatment and outcomes of patients with diabetes, promote early detection, and, ultimately, prevent the onset of the disease.	
The Hospitalist Movement in the United States: What Does It Mean for Internists?	326
<i>D.R. Goldmann</i>	
Accompanying this issue is a supplement on the hospitalist movement. The articles in this supplement define the current manpower status of this movement, examine some of its early experiments, and offer the perspectives of some of internal medicine's thought leaders on the implications of what it all means for our specialty.	
LETTERS	
Delayed Hospital Arrival for Acute Stroke	328
<i>C.R. Lacy, M. Bueno, and J.B. Kostis; M.A. Smith, E. Shahar, and R.V. Luepker</i>	
Breath Tests for Alcohol in Gastroesophageal Reflux Disease	328
<i>S. Kechagias, K.-Å. Jönsson, and A.W. Jones</i>	
Hypocalcemia Associated with Alendronate	329
<i>D.H. Schussheim, T.P. Jacobs, and S.J. Silverberg</i>	
Leg Ischemia in a Patient Receiving Ritonavir and Ergotamine	329
<i>A. Montero, A.G. Giovannoni, and P.L. Tvrde</i>	
Troglitazone-Associated Hepatic Failure	330
