| ARTICLES | | BRIEF COMMUNICATIONS | |
|---|-----|--|-----|
| Older Age, Aggressiveness of Care, and Survival for Seriously Ill, Hospitalized Adults | 721 | Influence of the Vitamin D Receptor Gene Polymorphism on Bone Loss in Men after Liver Transplantation | 752 |
| <i>M.B. Hamel, R.B. Davis, J.M. Teno, W.A. Knaus, J. Lynn, F. Harrell Jr., A.N. Galanos, A.W. Wu, and R.S. Phillips, for the SUPPORT Investigators</i> | | <i>J. Guardiola, X. Xiol, R. Sallie, J.M. Nolla, D. Roig-Escofet, E. Jaurieta, and L. Casais</i> | |
| This study found a modest association between patient age and short-term survival of serious illness. This age effect was not explained by the current practice of providing less aggressive care to elderly patients. | | Vitamin D receptor gene polymorphism influences bone loss after liver transplantation. Patients with the <i>bb</i> genotype are, to some extent, protected against post-transplantation bone loss. | |
| Prophylactic Fluconazole in Liver Transplant Recipients. A Randomized, Double-Blind, Placebo-Controlled Trial | 729 | Synovial Fluid Analysis for Diagnosis of Intercritical Gout | 756 |
| <i>D.J. Winston, A. Pakrasi, and R.W. Busuttill</i> | | <i>E. Pascual, E. Battle-Gualda, A. Martínez, J. Rosas, and P. Vela</i> | |
| Prophylactic fluconazole after liver transplantation decreases fungal colonization, prevents superficial and invasive fungal infections, and is not associated with appreciable hepatotoxicity. Although this therapy is related to fewer deaths from fungal infection compared with placebo, it does not improve overall survival. | | Arthrocentesis of asymptomatic knees and first metatarsophalangeal joints and synovial fluid analysis are simple procedures that facilitate the diagnosis of gout during intercritical periods. | |
| Malignant Neoplasms in Long-Term Survivors of Bone Marrow Transplantation | 738 | UPDATES | |
| <i>H.J. Kolb, G. Socié, T. Duell, M.T. Van Lint, A. Tichelli, J.F. Apperley, E. Nekolla, P. Ljungman, N. Jacobsen, M. van Weel, R. Wick, M. Weiss, and H.G. Prentice, for the Late Effects Working Party of the European Cooperative Group for Blood and Marrow Transplantation and the European Late Effect Project Group</i> | | Update in Oncology | 760 |
| The spectrum of neoplasms and immunosuppressive treatment with cyclosporine for chronic graft-versus-host disease as dominant risk factors indicate that immunosuppression is the major cause of malignant neoplasms in patients receiving bone marrow transplants. | | <i>J.C. Ruckdeschel</i> | |
| Influence of Patient Education on Profiles of Physician Practices | 745 | Among the many important topics that currently come under the heading of oncology, this Update focuses on the most common diseases: prostate cancer, breast cancer, and lung cancer. | |
| <i>K. Fiscella and P. Franks</i> | | Combination Therapy with Multiple Disease-Modifying Antirheumatic Drugs in Rheumatoid Arthritis: A Preventive Strategy | 768 |
| Profiles of physician practices that base ratings of physician performance on patients' physical and mental health status are substantially affected by patients' level of education. However, these results do not suggest that physicians who care for less educated patients provide worse care. Physician profiling should account for differences in patients' level of education. | | <i>T. Pincus, J.R. O'Dell, and J.M. Kremer</i> | |
| | | This paper discusses the rationale for a rheumatoid arthritis treatment strategy that aims to control inflammation as completely as possible; summarizes evidence from randomized, controlled clinical trials of combination disease-modifying antirheumatic drugs to control inflammation; and describes a contemporary approach to rheumatoid arthritis. | |

| MEDICINE AND PUBLIC ISSUES | | Hormone Replacement Therapy in Postmenopausal U.S. Women | 791 |
| Name-Based Surveillance and Public Health Interventions for Persons with HIV Infection | 775 | Thrombolytic Predictive Instrument | 791 |
| <i>D.H. Osmond, A.B. Bindman, K. Vranizan, J.S. Lehman, F.M. Hecht, D. Keane, and A. Reingold, for the Multistate Evaluation of Surveillance for HIV Study Group</i> | | The Park Nicollet Experience | 792 |
| Name-based surveillance of HIV infection is the law in 31 U.S. states, but it remains controversial. The Multistate Evaluation of Surveillance for HIV Study Group surveyed a cross-sectional probability sample of persons with AIDS in 5 states that use name-based surveillance. The results suggest that the potential for negative or positive effects of this surveillance on partner notification and access to health care has been exaggerated. | | Sigmoidoscopy Reimbursement | 792 |
| EDITORIAL | | Splenectomy-Induced Portal Hypertension and Pulmonary Hypertension | 793 |
| The Legacy of SUPPORT | 780 | False-Positive HIV Diagnosis by HIV-1 Plasma Viral Load Testing | 794 |
| <i>S.A. Schroeder</i> | | Nosocomial Transmission of Hepatitis C Virus | 794 |
| Few clinical research projects have generated as much public interest or as many published articles as SUPPORT (the Study to Understand Prognoses and Preferences for Outcomes and Risks of Treatment). The latest of these articles appears in this issue. What accounts for SUPPORT's impact? | | Renin-Secreting Adenocarcinoma of the Colon | 794 |
| ON BEING A DOCTOR | | Famotidine-Induced Erythema Multiforme: Cross-Sensitivity with Cimetidine | 795 |
