ARTICLES

Ardeparin Sodium for Extended Out-of-Hospital Prophylaxis against Venous Thromboembolism after Total Hip or Knee Replacement. A Randomized, Double-Blind, Placebo-Controlled Trial

853

J.A. Heit, C.G. Elliott, A.A. Trowbridge, B.F. Morrey, M. Gent, and J. Hirsh, for the Ardeparin Arthroplasty Study Group

Among patients who had total knee or total hip replacement and received 4 to 10 days of postoperative ardeparin prophylaxis, the cumulative incidence of symptomatic venous thromboembolism or death after hospital discharge was not significantly reduced by extended out-of-hospital ardeparin prophylaxis.

Prognostic Value of Treadmill Exercise Testing in Elderly Persons

862

T.Y. Goraya, S.J. Jacobsen, P.A. Pellikka, T.D. Miller, A. Khan, S.A. Weston, B.J. Gersh, and V.L. Roger

In elderly patients, treadmill exercise testing provided prognostic information that was incremental to clinical data. After adjustment for clinical factors, workload was the only treadmill exercise testing variable strongly associated with outcome, and its prognostic effect was of the same magnitude in elderly and younger persons.

Recombinant Human Relaxin in the Treatment of Scleroderma. A Randomized, Double-Blind, Placebo-Controlled Trial

871

J.R. Seibold, J.H. Korn, R. Simms, P.J. Clements, L.W. Moreland, M.D. Mayes, D.E. Furst, N. Rothfield, V. Steen, M. Weisman, D. Collier, F.M. Wigley, P.A. Merkel, M.E. Csuka, V. Hsu, S. Rocco, M. Erikson, J. Hannigan, W.S. Harkonen, and M.E. Sanders

Twenty-four weeks of recombinant human relaxin therapy was associated with reduced skin thickening, improved mobility, and improved function in patients with moderate to severe diffuse scleroderma.

BRIEF COMMUNICATIONS

Lower-Extremity Edema Associated with Gene Transfer of Naked DNA Encoding Vascular Endothelial Growth Factor

880

I. Baumgartner, G. Rauh, A. Pieczek, D. Wuensch, M. Magner, M. Kearney, R. Schainfeld, and J.M. Isner

Vascular endothelial growth factor (VEGF) may enhance vascular permeability in humans. In this study, 34% of patients undergoing VEGF gene transfer developed lower-extremity edema. This condition responded to oral diuretic therapy and did not seem to be associated with serious sequelae.

Trimethoprim-Sulfamethoxazole Compared with Ciprofloxacin for Treatment and Prophylaxis of *Isospora belli* and *Cyclospora cayentanensis* Infection in HIV-Infected Patients. A Randomized, Controlled Trial

885

R.-I. Verdier, D.W. Fitzgerald, W.D. Johnson Jr., and J.W. Pape

A 1-week course of trimethoprim-sulfamethoxazole was effective in HIV-infected patients with cyclosporiasis or isosporiasis. Although ciprofloxacin was not as effective, it is acceptable for patients who cannot tolerate trimethoprim-sulfamethoxazole.

ACADEMIA AND CLINIC

Faculty Perceptions of Gender Discrimination and Sexual Harassment in Academic Medicine

889

P.L. Carr, A.S. Ash, R.H. Friedman, L. Szalacha, R.C. Barnett, A. Palepu, and M.M. Moskowitz

Despite substantial increases in the number of female faculty, reports of gender-based discrimination and sexual harassment remain common.

REVIEWS

The Alcohol Hangover

897

J.G. Wiese, M.G. Shlipak, and W.S. Browner

Alcohol hangover, a common disorder, has substantial morbidity and societal cost. Appropriate management may relieve symptoms in many patients.

The Efficacy of "Distant Healing": A Systematic Review of Randomized Trials

903

J.A. Astin, E. Harkness, and E. Ernst

The methodologic limitations of several studies make it difficult to draw definitive conclusions about the efficacy of distant healing (prayer, mental healing, Therapeutic Touch, or spiritual healing). However, given that approximately 57% of 23 trials showed a positive treatment effect, the issue thus far merits further study.

PERSPECTIVE

The Tragic Events of April 1996

911

J. Coulehan

In 1996, Port Arthur, Tasmania, was the site of the worst mass murder in Australian history. This paper highlights the contrast between the Australian response to this tragedy and how U.S. society responds to similar violence.
