## ARTICLES

### **Gastrointestinal Tolerability and Effectiveness of Rofecoxib versus Naproxen in the Treatment of Osteoarthritis. A Randomized, Controlled Trial** 539

J.R. Lisse, M. Perlman, G. Johansson, J.R. Shoemaker, J. Schechtman, C.S. Skalky, M.E. Dixon, A.B. Polis, A.J. Mollen, and G.P. Geba, for the ADVANTAGE Study Group

During 12-week treatment of osteoarthritis, patients taking rofecoxib were less likely to discontinue using medication because of gastrointestinal side effects than patients taking naproxen. The 2 drugs were equally effective in treating osteoarthritis.

Summary for Patients 1-29

### **Magnetic Resonance Cholangiopancreatography: A Meta-Analysis of Test Performance in Suspected Biliary Disease** 547

J. Romagnuolo, M. Bardou, E. Rahme, L. Joseph, C. Reinhold, and A.N. Barkun

Magnetic resonance cholangiopancreatography is a noninvasive imaging test with excellent overall sensitivity and specificity for showing biliary obstruction and its location. Although the test is less sensitive for detecting stones or malignant obstruction, the differences are small and may not be clinically important.

Summary for Patients 1-32

### **Racial Differences Pertaining to a Belief about Lung Cancer Surgery. Results of a Multicenter Survey** 558

M.L. Margolis, J.D. Christie, G.A. Silvestri, L. Kaiser, S. Santiago, and J. Hansen-Flaschen

Many general pulmonary outpatients and patients facing lung surgery believe that a thoracotomy promotes metastasis from lung cancer. This belief is particularly prevalent among African-American patients, and it may help to explain racial differences in rates of surgery for early-stage lung cancer.

Summary for Patients 1-38

## BRIEF COMMUNICATION

### **An Outbreak of Severe Acute Respiratory Syndrome among Hospital Workers in a Community Hospital in Hong Kong** 564

A.S. Ho, J.J.Y. Sung, and M. Chan-Yeung

Early in the SARS epidemic, patients who had not been suspected of having SARS transmitted the coronavirus to

many health care workers in a Hong Kong hospital. The outbreak of SARS in health care workers led the hospital to isolate suspected SARS cases and require health care workers to use protective devices.

Summary for Patients 1-47

## IMPROVING PATIENT CARE

### **Innovations in Access to Care: A Patient-Centered Approach** 568

L.L. Berry, K. Seiders, and S.S. Wilder

This article defines patient-centered access, identifies its primary characteristics, discusses its key principles, and considers its future evolution.

## ACADEMIA AND CLINIC

### **Evaluation of Acute Knee Pain in Primary Care** 575

J.L. Jackson, P.G. O'Malley, and K. Kroenke

The authors recommend selective use of plain radiographs to evaluate knee pain. The Ottawa knee rules reliably identify patients who do not have knee fracture. A careful physical examination should suffice to decide when to refer patients with potential meniscal and ligament injuries, and clinical criteria rather than plain films are best for evaluating possible osteoarthritis.

## PERSPECTIVE

### **The Lessons of SARS** 589

E.J. Emanuel

Severe acute respiratory syndrome (SARS) has caused a small number of deaths compared with other public health scourges, yet the SARS epidemic has much to teach us. The author describes 4 enduring lessons.

## EDITORIALS

### **Listening to SARS: Lessons for Infection Control** 592

R.P. Wenzel and M.B. Edmond

The coronavirus that causes SARS is the latest in a series of emerging pathogens that challenge our global society. The virus has a remarkable ability to amplify its communicability to become an almost "perfect" nosocomial pathogen. We must institutionalize the critical lessons learned from managing the 2003 SARS epidemic as we prepare for the next emerging pathogen.

**General Internists and Family Physicians: Partners in Geriatric Medicine?** 594

J.W. Mold, L.A. Green, and G.E. Fryer

The articles in the supplement to this issue show that internal medicine is committed to first-class training in geriatric medicine. So is family medicine. This undertaking is important and difficult, and the 2 disciplines should join forces wherever possible.

**General Internal Medicine and Geriatrics: Collaboration To Address the Aging Imperative Can't Wait** 597

W.R. Hazzard

The progressive aging of the U.S. population presents an unprecedented demographic challenge to our health care system. To address this imperative, gerontology and geriatrics must become embedded into medical education at all levels. This editorial focuses on partnerships between general internal medicine and the field of geriatrics.

LETTERS

*Comments and Responses*

**Echinacea for the Common Cold** 599

E.B. Russo; S.G. Abrahams; W.L. Applequist; S. Shober; P. Mittman, D. Wollner, and L. Kim; P.J. Millea; B. Barrett

**Alcohol, Postmenopausal Hormones, and Breast Cancer** 601

S. Gallus, S. Franceschi, and C. La Vecchia

**Update in Hospital Medicine** 602

T. Painton; B.E. Flansbaum and J.M. Huddleston

**Acute Migraine Treatment Guideline** 603

C. Marino; V. Snow

*Clinical Observation*

**An Unusual Case of Ischemic Bowel** 604

M. Reinig, P. Arcand, H. Soto, and R. Yood

*Corrections*

**Correction: Treatment of Chronic Hepatitis C in a State Correctional Facility** 605

**Correction: National Kidney Foundation Practice Guidelines for Chronic Kidney Disease** 605
